

Hi, my name is

Brittany Chiang.

I build things for the web.

I'm a software engineer based in Boston, MA specializing in building (and occasionally designing) exceptional websites, applications, and everything in between.

Get In Touch

## 01. About Me

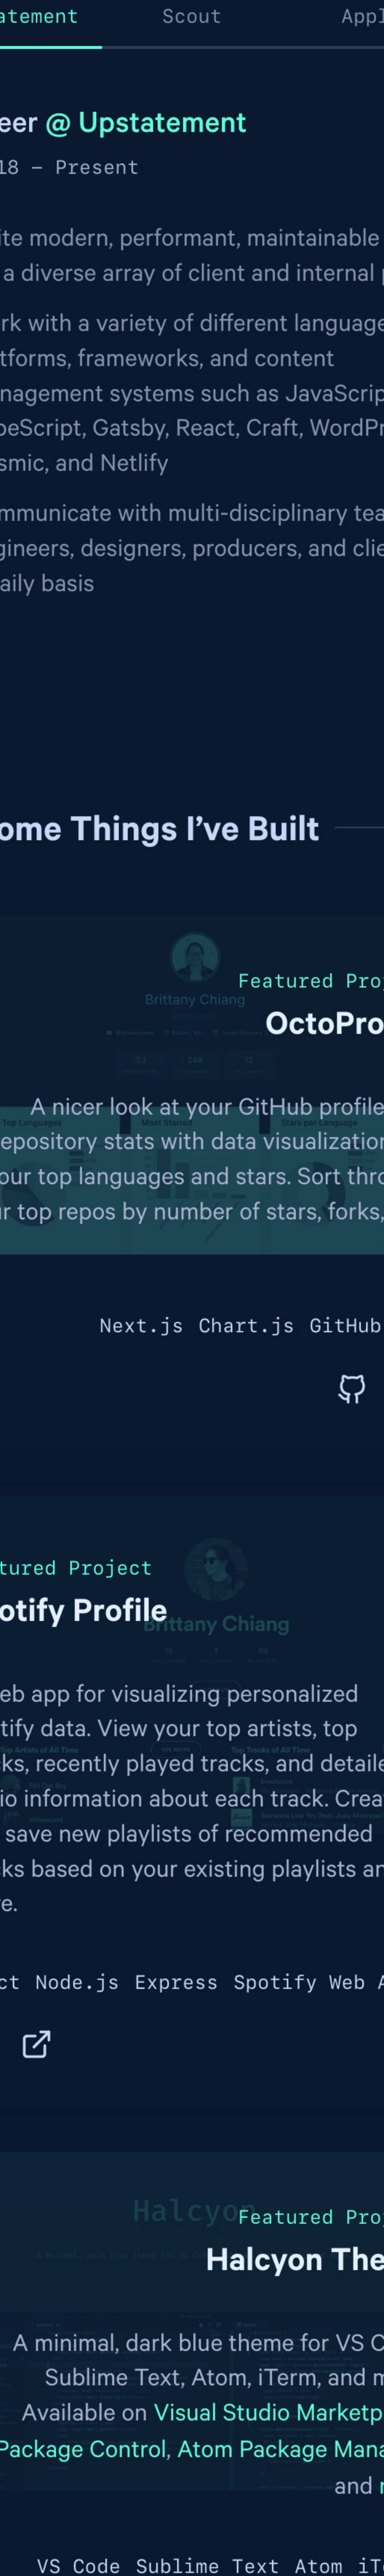

Hello! I'm Brittany, a software engineer based in Boston, MA.

I enjoy creating things that live on the internet, whether that be websites, applications, or anything in between. My goal is to always build products that provide pixel-perfect, performant experiences.

Shortly after graduating from [Northeastern University](#), I joined the engineering team at [Upstatement](#) where I work on a wide variety of interesting and meaningful projects on a daily basis.

Here are a few technologies I've been working with recently:

- JavaScript (ES6+)
- HTML & (S)CSS
- React
- Vue
- Node.js
- WordPress

## 02. Where I've Worked

Upstatement

Scout

Apple

### Engineer @ Upstatement

May 2018 – Present

- Write modern, performant, maintainable code for a diverse array of client and internal projects
- Work with a variety of different languages, platforms, frameworks, and content management systems such as JavaScript, TypeScript, Gatsby, React, Craft, WordPress, Prismic, and Netlify
- Communicate with multi-disciplinary teams of engineers, designers, producers, and clients on a daily basis

## 03. Some Things I've Built

**Featured Project**

### OctoProfile

A nicer look at your GitHub profile and repository stats with data visualizations of your top languages and stars. Sort through your top repos by number of stars, forks, and size.

Next.js Chart.js GitHub API

**Featured Project**

### Spotify Profile

A web app for visualizing personalized Spotify data. View your top artists, top tracks, recently played tracks, and detailed audio information about each track. Create and save new playlists of recommended tracks based on your existing playlists and more.

React Node.js Express Spotify Web API

**Featured Project**

### Halcyon Theme

A minimal, dark blue theme for VS Code, Sublime Text, Atom, iTerm, and more. Available on [Visual Studio Marketplace](#), [Package Control](#), [Atom Package Manager](#), and [npm](#).

VS Code Sublime Text Atom iTerm2 Hyper

## Other Noteworthy Projects

[view the archive](#)

### Integrating Algolia Search with WordPress Multisite

Building a custom multisite compatible WordPress plugin to build global search with Algolia

Algolia WordPress PHP

### Time to Have More Fun

A single page web app for helping me choose where to travel, built with Next.js, Firebase, and Tailwind CSS

Next.js Tailwind CSS Firebase

### Building a Headless Mobile App CMS From Scratch

Find out how we built a custom headless CMS with Node, Express, and Firebase for a project at Upstatement

Node Express Firebase Vue

### Google Keep Clone

A simple Google Keep clone built with Vue and Firebase.

Vue Firebase

### Apple Music Embeddable Web Player Widget

Embeddable web player widget for Apple Music that lets users log in and listen to full song playback in the browser leveraging [MusicKit.js](#). Read more about this project on [9to5Mac](#).

MusicKit.js JS SCSS

### Apple Music Facebook Messenger Integration

Facebook Messenger chat bot extension featuring authentication and full song streaming from within the Messenger app. Read more about it on [The Verge](#).

Ember JS SCSS
